

MULTI SOURCE CASE STUDY

Engagement IDs: eng-01

Client Named: False

=====

TITLES:

{'title': 'core banking for Tier-1 GCC retail bank', 'page': 'eng-01'}

CONTEXT:

{'region': 'Tier-1 GCC retail bank in GCC.', 'page': 'eng-01'}

CHALLENGE:

{'challenge': 'The legacy core banking platform could not support real-time payments, and end-of-day batch windows were overrunning into business hours.', 'page': 'eng-01'}

APPROACH:

{'approach': 'A phased migration from the legacy core to a modern event-driven platform, run as a shadow migration so the old and new systems processed in parallel until cutover.', 'page': 'eng-01'}

TECHNOLOGY:

{'technologies': 'Java, Spring Boot, Kafka, PostgreSQL', 'page': 'eng-01'}

OUTCOMES:

{'outcomes': 'payment latency reduced 45%; batch window shortened from 6 hours to 90 minutes; zero unplanned downtime during cutover', 'page': 'eng-01'}

CITATIONS:

{'claim': 'payment latency reduced 45%', 'source_ref': 'closeout.pdf#page=5', 'page_ref': 'eng-01'}

{'claim': 'batch window shortened from 6 hours to 90 minutes', 'source_ref': 'closeout.pdf#page=5', 'page_ref': 'eng-01'}

{'claim': 'zero unplanned downtime during cutover', 'source_ref': 'closeout.pdf#page=6', 'page_ref': 'eng-01'}
